Task 1: Setting Up SQL Environment & First Queries

Tools:

- Primary: MySQL Community Server + MySQL Workbench
- Alternatives: PostgreSQL + pgAdmin, SQLite + DB Browser, SQLFiddle, Google BigQuery Sandbox

Hints / Mini Guide:

1. Install MySQL Community Server and MySQL Workbench or choose a browser-based SQL tool to avoid setup delays.
2. Create a new database named intern_training_db to isolate your learning environment.
3. Understand what a database, schema, table, row, and column mean using real-life examples.
4. Create your first table students with columns like id, name, email, and age.
5. Insert at least 5 records using INSERT INTO statements with realistic data.
6. Retrieve all records using SELECT * to verify data insertion.
7. Practice filtering specific columns instead of selecting everything.
8. Execute queries multiple times to understand execution flow and result sets.

Deliverables:

- SQL file containing database creation, table creation, insert, and select queries

Final Outcome:

- Intern understands SQL environment, syntax structure, and basic data retrieval.

Interview Questions Related To Above Task:

- What is the difference between a database and a table?
- Why should we avoid using SELECT * in production?
- What happens if we insert incorrect data types?
- What is SQL and where is it used?
- Difference between MySQL and PostgreSQL?

📌 **Task Submission Guidelines**

- ⏰ **Time Window:**

Youcan complete the task anytime between 10:00 AM to 10:00 PM on the given day. Submission link closes at 10:00 PM

- 🔍 **Self-Research Allowed:**

Youare free to explore, Google, or refer to tutorials to understand concepts and complete the task effectively.

- 🛠️ **Debug Yourself:**

Tryto resolve all errors by yourself. This helps you learn problem-solving and ensures you don't face the same issues in future tasks.

- 💸 **No Paid Tools:**

Ifthe task involves any paid software/tools, do not purchase anything. Just learn the process or find free alternatives.

- 📁 **GitHub Submission:**

Create a new GitHub repository for each task.
Add everything you used for the task — code, datasets, screenshots (if any), and a short README.md explaining what you did.

📤 **Submit Here:**

After completing the task, paste your GitHub repo link and submit it using the link below:
