

Task 3: Filtering Data Using WHERE, AND, OR, LIKE

Tools:

- MySQL Workbench
- Alternatives: PostgreSQL, SQLite

Hints / Mini Guide:

1. Use WHERE clause to filter students by age.
2. Combine multiple conditions using AND and OR.
3. Search names using LIKE with wildcards % and _.
4. Filter records using IN and BETWEEN.
5. Handle NULL values using IS NULL.
6. Understand query execution order.
7. Optimize readability using aliases.
8. Practice real-life scenarios like email search.

Deliverables:

- SQL queries file demonstrating advanced filtering

Final Outcome:

- Intern can fetch precise data based on conditions.

Interview Questions Related To Above Task:

- Difference between = and LIKE?
- What does % do?
- How does SQL handle NULL?
- When to use BETWEEN?
- Difference between AND and OR?

📌 Task Submission Guidelines

- 🕒 **Time Window:**

You can complete the task anytime between 10:00 AM to 10:00 PM on the given day. Submission link closes at 10:00 PM

- 🔍 **Self-Research Allowed:**

You are free to explore, Google, or refer to tutorials to understand concepts and complete the task effectively.

- 🔧 **Debug Yourself:**

Try to resolve all errors by yourself. This helps you learn problem-solving and ensures you don't face the same issues in future tasks.

- 💰 **No Paid Tools:**

If the task involves any paid software/tools, do not purchase anything. Just learn the process or find free alternatives.

- 📁 **GitHub Submission:**

Create a new GitHub repository for each task.

Add everything you used for the task — code, datasets, screenshots (if any), and a short README.md explaining what you did.

- 📌 **Submit Here:**

After completing the task, paste your GitHub repo link and submit it using the link below:
