

Task 4: Sorting and Limiting Data

Tools:

- MySQL Workbench
- Alternatives: PostgreSQL

Hints / Mini Guide:

1. Sort data using ORDER BY ascending and descending.
2. Apply sorting on multiple columns.
3. Limit results using LIMIT.
4. Combine ORDER BY with WHERE.
5. Use OFFSET for pagination.
6. Understand performance impact.
7. Build a leaderboard-style query.
8. Test edge cases.

Deliverables:

- SQL script with sorted & paginated queries

Final Outcome:

- Intern understands result ordering and pagination.

Interview Questions Related To Above Task:

- Default sort order?
- Difference between LIMIT and OFFSET?
- Can we sort by column alias?
- Why pagination is needed?
- Performance impact of ORDER BY?

📌 Task Submission Guidelines

- 🕒 **Time Window:**

You can complete the task anytime between 10:00 AM to 10:00 PM on the given day. Submission link closes at 10:00 PM

- 🔍 **Self-Research Allowed:**

You are free to explore, Google, or refer to tutorials to understand concepts and complete the task effectively.

- 🔧 **Debug Yourself:**

Try to resolve all errors by yourself. This helps you learn problem-solving and ensures you don't face the same issues in future tasks.

- 💰 **No Paid Tools:**

If the task involves any paid software/tools, do not purchase anything. Just learn the process or find free alternatives.

- 📁 **GitHub Submission:**

Create a new GitHub repository for each task.

Add everything you used for the task — code, datasets, screenshots (if any), and a short README.md explaining what you did.

- 📤 **Submit Here:**

After completing the task, paste your GitHub repo link and submit it using the link below:
