

Task 6: CRUD Operations End-to-End

Tools:

- MySQL Workbench
- Alternatives: PostgreSQL, BigQuery Sandbox

Hints / Mini Guide:

1. Create a table employees.
2. Insert bulk data.
3. Read filtered data.
4. Update records using conditions.
5. Delete selective rows.
6. Practice safe deletes.
7. Use transactions if supported.
8. Validate before and after states.

Deliverables:

- Complete CRUD SQL script

Final Outcome:

- Intern masters daily SQL operations.

Interview Questions Related To Above Task:

- Difference between DELETE and TRUNCATE?
- What is CRUD?
- Why transactions matter?
- How to rollback?
- Risk of DELETE without WHERE?

📌 Task Submission Guidelines

- 🕒 **Time Window:**

You can complete the task anytime between 10:00 AM to 10:00 PM on the given day. Submission link closes at 10:00 PM

- 🔍 **Self-Research Allowed:**

You are free to explore, Google, or refer to tutorials to understand concepts and complete the task effectively.

- 🔧 **Debug Yourself:**

Try to resolve all errors by yourself. This helps you learn problem-solving and ensures you don't face the same issues in future tasks.

- 💰 **No Paid Tools:**

If the task involves any paid software/tools, do not purchase anything. Just learn the process or find free alternatives.

- 📁 **GitHub Submission:**

Create a new GitHub repository for each task.

Add everything you used for the task — code, datasets, screenshots (if any), and a short README.md explaining what you did.

- 📌 **Submit Here:**

After completing the task, paste your GitHub repo link and submit it using the link below:
