

Task 14: Create a Login UI Using LocalStorage (Frontend Only)

Tools:

- Primary: VS Code, JavaScript, Browser
- Alternatives: CodePen

Hints / Mini Guide:

1. Design a login and registration UI using HTML and CSS.
2. Capture user credentials using JavaScript form handling.
3. Store user data securely (for demo purpose) in LocalStorage.
4. Validate login credentials by comparing stored values.
5. Display success and error messages dynamically.
6. Implement logout functionality by clearing session data.
7. Restrict access to a protected page without login.
8. Redirect users based on authentication status.
9. Clearly comment that this is frontend-only authentication.

Deliverables:

- Functional frontend login system
- Understanding of authentication flow basics

Interview Questions Related To Above Task:

- What is authentication?
- Why is frontend-only auth insecure?
- How does LocalStorage differ from SessionStorage?
- What is authorization?
- How is authentication handled in real apps?

📌 Task Submission Guidelines

- 🕒 **Time Window:**

You can complete the task anytime between 10:00 AM to 10:00 PM on the given day. Submission link closes at 10:00 PM

- 🔍 **Self-Research Allowed:**

You are free to explore, Google, or refer to tutorials to understand concepts and complete the task effectively.

- 🔧 **Debug Yourself:**

Try to resolve all errors by yourself. This helps you learn problem-solving and ensures you don't face the same issues in future tasks.

- 💰 **No Paid Tools:**

If the task involves any paid software/tools, do not purchase anything. Just learn the process or find free alternatives.

- 📁 **GitHub Submission:**

Create a new GitHub repository for each task.

Add everything you used for the task — code, datasets, screenshots (if any), and a short README.md explaining what you did.

- 📌 **Submit Here:**

After completing the task, paste your GitHub repo link and submit it using the link below:
