

TASK 13: JDBC – Java Database Connectivity with MySQL

Tools:

- Primary: MySQL (Free), IntelliJ IDEA, JDBC Driver
- Alternatives: SQLite, H2 Database

Hints / Mini Guide:

1. Install MySQL and create a simple database and table.
2. Load JDBC driver and establish database connection.
3. Insert records using PreparedStatement.
4. Retrieve records using ResultSet.
5. Implement update and delete operations.
6. Prevent SQL Injection using prepared queries.
7. Handle database exceptions gracefully.
8. Close database connections properly.

Deliverables:

- Working Java program connected to database
- Database table with CRUD operations

Interview Questions Related To Above Task:

- What is JDBC?
- Statement vs PreparedStatement?
- What is SQL Injection?
- Why connection pooling?
- Steps to connect Java with DB?

📌 Task Submission Guidelines

- 🕒 **Time Window:**

You can complete the task anytime between 10:00 AM to 10:00 PM on the given day. Submission link closes at 10:00 PM

- 🔍 **Self-Research Allowed:**

You are free to explore, Google, or refer to tutorials to understand concepts and complete the task effectively.

- 🔧 **Debug Yourself:**

Try to resolve all errors by yourself. This helps you learn problem-solving and ensures you don't face the same issues in future tasks.

- 💰 **No Paid Tools:**

If the task involves any paid software/tools, do not purchase anything. Just learn the process or find free alternatives.

- 📁 **GitHub Submission:**

Create a new GitHub repository for each task.

Add everything you used for the task — code, datasets, screenshots (if any), and a short README.md explaining what you did.

- 📌 **Submit Here:**

After completing the task, paste your GitHub repo link and submit it using the link below:
