

TASK 6: Object-Oriented Modeling – Bank Account System

Tools:

- Primary: IntelliJ IDEA
- Alternatives: Eclipse

Hints / Mini Guide:

1. Design a BankAccount class with private variables.
2. Use constructors for initialization.
3. Implement encapsulation using getters and setters.
4. Add methods for deposit and withdrawal.
5. Validate transactions using business rules.
6. Create multiple account objects.
7. Maintain account transaction history.
8. Demonstrate object interaction.

Deliverables:

- OOP-based banking system
- UML class diagram (optional)

Interview Questions Related To Above Task:

- What is encapsulation?
- Why variables should be private?
- Role of constructors?
- Object vs class?
- What is data hiding?

📌 Task Submission Guidelines

- 🕒 **Time Window:**

You can complete the task anytime between 10:00 AM to 10:00 PM on the given day. Submission link closes at 10:00 PM

- 🔍 **Self-Research Allowed:**

You are free to explore, Google, or refer to tutorials to understand concepts and complete the task effectively.

- 🔧 **Debug Yourself:**

Try to resolve all errors by yourself. This helps you learn problem-solving and ensures you don't face the same issues in future tasks.

- 💰 **No Paid Tools:**

If the task involves any paid software/tools, do not purchase anything. Just learn the process or find free alternatives.

- 📁 **GitHub Submission:**

Create a new GitHub repository for each task.

Add everything you used for the task — code, datasets, screenshots (if any), and a short README.md explaining what you did.

- 📌 **Submit Here:**

After completing the task, paste your GitHub repo link and submit it using the link below:
