

Task 10: Creating and Using SQL Views

Tools:

- MySQL Workbench
- Alternatives: PostgreSQL, BigQuery Sandbox, SQLite

Hints / Mini Guide:

1. Create a complex query joining employees and departments.
2. Convert this query into a SQL VIEW.
3. Query data directly from the created view.
4. Apply filtering and sorting on views.
5. Understand why views improve security and simplicity.
6. Attempt inserting data through views and analyze limitations.
7. Drop and recreate views safely.
8. Map views to reporting dashboards.

Deliverables:

- SQL script defining and using views

Final Outcome:

- Intern can create reusable, secure query layers.

Interview Questions Related To Above Task:

- What is a SQL view?
- Difference between view and table?
- Are views stored physically?
- Can we update data through a view?
- Why are views used in enterprises?

📌 Task Submission Guidelines

- 🕒 **Time Window:**

You can complete the task anytime between 10:00 AM to 10:00 PM on the given day. Submission link closes at 10:00 PM

- 🔍 **Self-Research Allowed:**

You are free to explore, Google, or refer to tutorials to understand concepts and complete the task effectively.

- 🔧 **Debug Yourself:**

Try to resolve all errors by yourself. This helps you learn problem-solving and ensures you don't face the same issues in future tasks.

- 💰 **No Paid Tools:**

If the task involves any paid software/tools, do not purchase anything. Just learn the process or find free alternatives.

- 📁 **GitHub Submission:**

Create a new GitHub repository for each task.

Add everything you used for the task — code, datasets, screenshots (if any), and a short README.md explaining what you did.

- 📌 **Submit Here:**

After completing the task, paste your GitHub repo link and submit it using the link below:
