

Task 2: Style the Profile Page Using CSS Box Model

Tools:

- Primary: VS Code, Browser DevTools
- Alternatives: CodePen, JSFiddle

Hints / Mini Guide:

1. Create a separate style.css file and link it properly to your HTML file using the <link> tag inside the <head> section.
2. Apply global styles such as font family, background color, and text color to understand cascading behavior.
3. Use the CSS box model concepts (margin, border, padding, content) to space elements visually.
4. Style headers, paragraphs, and lists differently to improve visual hierarchy and readability.
5. Add borders and background colors temporarily to visualize how padding and margin affect layout.
6. Implement class-based styling instead of inline styles to follow scalable CSS practices.
7. Use browser developer tools to inspect elements and tweak spacing live.
8. Refactor repetitive styles into reusable CSS classes.

Deliverables:

- Visually structured profile page using proper spacing
- Clear understanding of CSS box model implementation

Interview Questions Related To Above Task:

- Explain the CSS box model.
- Difference between margin and padding?
- Why should inline CSS be avoided?
- What is cascading in CSS?
- How do browser DevTools help developers?

📌 Task Submission Guidelines

- 🕒 **Time Window:**

You can complete the task anytime between 10:00 AM to 10:00 PM on the given day. Submission link closes at 10:00 PM

- 🔍 **Self-Research Allowed:**

You are free to explore, Google, or refer to tutorials to understand concepts and complete the task effectively.

- 🔧 **Debug Yourself:**

Try to resolve all errors by yourself. This helps you learn problem-solving and ensures you don't face the same issues in future tasks.

- 💰 **No Paid Tools:**

If the task involves any paid software/tools, do not purchase anything. Just learn the process or find free alternatives.

- 📁 **GitHub Submission:**

Create a new GitHub repository for each task.

Add everything you used for the task — code, datasets, screenshots (if any), and a short README.md explaining what you did.

- 📌 **Submit Here:**

After completing the task, paste your GitHub repo link and submit it using the link below:
