

Task 6: Host a Website Using GitHub Pages

Tools:

- Primary: Git, GitHub
- Alternatives: Netlify, Vercel

Hints / Mini Guide:

1. Initialize a Git repository locally.
2. Push your project to a GitHub repository.
3. Enable GitHub Pages in repository settings.
4. Select correct branch and folder.
5. Access the live URL.
6. Fix path issues for assets.
7. Update site and redeploy.
8. Understand static hosting limitations.

Deliverables:

- Live hosted website
- Public project link

Interview Questions Related To Above Task:

- What is GitHub Pages?
- Difference between static and dynamic sites?
- Why version control is important?
- What is a repository?
- How does hosting work?

📌 Task Submission Guidelines

- 🕒 **Time Window:**

You can complete the task anytime between 10:00 AM to 10:00 PM on the given day. Submission link closes at 10:00 PM

- 🔍 **Self-Research Allowed:**

You are free to explore, Google, or refer to tutorials to understand concepts and complete the task effectively.

- 🔧 **Debug Yourself:**

Try to resolve all errors by yourself. This helps you learn problem-solving and ensures you don't face the same issues in future tasks.

- 💰 **No Paid Tools:**

If the task involves any paid software/tools, do not purchase anything. Just learn the process or find free alternatives.

- 📁 **GitHub Submission:**

Create a new GitHub repository for each task.

Add everything you used for the task — code, datasets, screenshots (if any), and a short README.md explaining what you did.

- 📌 **Submit Here:**

After completing the task, paste your GitHub repo link and submit it using the link below:
